

Orthogonality properties of normal modes

Suppose that we have two modes of the generalized wave equation,
 $\{\omega_r, \varphi_r(x)\}$, $\{\omega_s, \varphi_s(x)\}$, $\omega_s \neq \omega_r$

These are modes derived by solving the eigenvalue problem

$$\frac{d}{dx} \left[A(x) \frac{d\varphi(x)}{dx} \right] + \omega^2 B(x) \varphi(x) = 0, \quad 0 \leq x \leq L \quad (4b)$$

with boundary conditions are of (4c). It follows that for each of these modes we can write,

$$\frac{d}{dx} \left[A(x) \frac{d\varphi_r(x)}{dx} \right] + \omega_r^2 B(x) \varphi_r(x) = 0$$

$$\frac{d}{dx} \left[A(x) \frac{d\varphi_s(x)}{dx} \right] + \omega_s^2 B(x) \varphi_s(x) = 0$$

$$\left. \begin{array}{l} (9a) \quad (\times \varphi_s(x)) \\ (9b) \quad (\times \varphi_r(x)) \end{array} \right\} \Rightarrow$$

$$\Rightarrow \frac{d}{dx} \left[A(x) \frac{d\varphi_r(x)}{dx} \right] \varphi_s(x) + \omega_r^2 B(x) \varphi_r(x) \varphi_s(x) = 0 \Rightarrow \int_0^L dx \Rightarrow$$

$$\frac{d}{dx} \left[A(x) \frac{d\varphi_s(x)}{dx} \right] \varphi_r(x) + \omega_s^2 B(x) \varphi_s(x) \varphi_r(x) = 0 \Rightarrow \int_0^L dx \Rightarrow$$

$$\int u dv = uv - \int v du$$

2

$$\int_0^L \underbrace{\frac{d}{dx} \left[A(x) \frac{d\phi_r(x)}{dx} \right]}_{dv} \underbrace{\phi_s(x)}_u dx + \omega_r^2 \int_0^L B(x) \phi_r(x) \phi_s(x) dx = 0 \Rightarrow$$

\Rightarrow Perform integration by parts of the first term ($\int u dv = uv - \int v du$) \Rightarrow

$$\Rightarrow A(x) \frac{d\phi_r(x)}{dx} \phi_s(x) \Big|_0^L - \int_0^L A(x) \frac{d\phi_r(x)}{dx} \frac{d\phi_s(x)}{dx} dx + \omega_r^2 \int_0^L B(x) \phi_r(x) \phi_s(x) dx = 0$$

0 \leftarrow For the 'simple' boundary conditions (4c) that we considered, either ϕ_r or ϕ_s or their derivatives are equal to zero at the boundaries!

We can do the identical operation for the second equation \Rightarrow

$$\Rightarrow - \int_0^L A(x) \frac{d\phi_s(x)}{dx} \frac{d\phi_r(x)}{dx} dx + \omega_s^2 \int_0^L B(x) \phi_s(x) \phi_r(x) dx = 0$$

$$\Rightarrow (\omega_r^2 - \omega_s^2) \int_0^L B(x) \phi_r(x) \phi_s(x) dx = 0 \Rightarrow \text{But, since } \omega_r \neq \omega_s \Rightarrow$$

$$\Rightarrow \int_0^L B(x) \phi_r(x) \phi_s(x) dx = 0, \quad r \neq s. \quad \text{But recall normalization } \int_0^L B(x) \phi_r^2(x) dx = 1$$
